All colors shown on this chart represent both pre-blended and field-blended colors. The colors are represented as closely as possible. Upon installation, variations can be expected due to differences in cement, aggregates, method of application and light sources. This printed color chart is for reference purposes. Euclid Chemical recommends choosing colors from actual test samples.

FIELD BLENDING
LEVEL TOP SYSTEMS

EUCLID CHEMICAL

For field pigmenting a Level Top product, the material may be pigmented on the jobsite by the contractor. The best product to use for this is the Level Top Color Pack, which is packaged in two-pound bags of powdered pigment.

A word of caution regarding field pigmenting Level Top products is necessary due to the striking difference in base colors of Stain, Polish, and PC-Agg. Level Top Stain goes down gray but cures to a very light, almost white, surface. Level Top Polish cures light to medium gray. Level Top PC-Agg (in standard gray) cures to a brownish/ gray hue, while Level Top PC-Agg #3 White cures white. Add the same Level Top Color Pack to these four products and very different final shades will result. Please refer to the dosage chart for proper Level Top product and color pack combinations.

When mixing the product, always add the Level Top Color Packs to the water prior to the addition of the Level Top material. Mix the water and Color Pack for several seconds until the color is completely dispersed, then add the Level Top product to the pigmented mix water. A large mixer can be used for mixing multi-bag batches.

Increte Color Packs may also be used with Level Top products. Increte Color Packs are produces in one-pound units, therefore a minimum of two are required in place of one Level Top Color Pack. Additionally, the resulting color may not match the Increte Standard Color Chart when used with Level Top products. However, using pre-measured Level Top Color Packs to pigment Level Top products is highly recommended.

Integrally coloring Level Top Stain, Polish, and PC-AGG is a preferred option to staining the floor afterwards. Not only is the look of a stained surface quite different, but also integral color will not fade or "walk off" which can happen with stains.

A full scale pre-project mock-up of Level Top with the specific polishing contractor, polishing equipment and desired pigment packs is always recommended for best results.
