

## PROJECT PROFILE

# DECORATIVE ROUNDABOUT

## PROJECT DATA

**Location** – Clinton, UT

**Application** – Decorative Reconstruction

**Contractor** – Marsh Construction

**Concrete Producer** – Jack B. Parson Companies

**Material Supplier** – Jack B. Parson Companies

**Total Area** – 378.50 yd<sup>3</sup> (over 25,000 f<sup>2</sup>) of color

## PRODUCTS FEATURED

### COLOR-CRETE™

Admixture for Color Conditioned Concrete

## SCOPE OF PROJECT

- Reconstruction of street and roundabout
- INTEGRAL COLOR batched with COLOR-MATIC II liquid color dispenser.
- Stamped Colored Concrete/ Broomed Colored Concrete

## PROJECT SUMMARY

For the reconstruction of this high traffic roundabout in Clinton, Utah, Increte's **COLOR-CRETE** liquid Integral was chosen for its outstanding beauty and durability. Increte formulated a custom red to match DOT specifications, a color used for both aesthetic and safety reasons. Medians and safety zones between the sidewalk and roadway were stamped with a natural flagstone pattern while the crosswalks were broom finished. The concrete was supplied by Jack B. Parson Companies who exclusively uses Increte's Color-Matic liquid pigment dispensing equipment.

Using the highest quality raw materials, **COLOR-CRETE** liquid integral pigments exceed ASTM standard C-979 for integrally colored concrete ensuring both strength and long term durability. Increte's color matching process uses the most advanced equipment and techniques, including spectrophotometric analysis and evaluation in an environmentally sealed light booth using four different illuminants.
