

## EUCLID CHEMICAL

- High Strength
- Long Slump Life
- High Modulus of Elasticity
- High Early Strength
- Mass Concrete
- Low Heat
- Self-Consolidating Concrete

## PRODUCTS

Plastol  
Vistrol  
Eucon Stasis  
Eucon MSA

# FREEDOM TOWER

Euclid Chemical admixtures have been used on numerous high-rise commercial and residential buildings over the years. Freedom Tower, one of the most iconic American skyscrapers of the century, was built upon a high-performance concrete foundation utilizing Euclid Chemical's admixtures. To get the job done right, Euclid Chemical worked with Laquilla and Empire Transit Mix to ensure proper mix designs to achieve high strength and low heat generation.

The events of September 11th forever changed the way we approach architecture and design. With safety being the utmost concern, Freedom Tower's base was encased in several feet of high performance concrete that is roughly three times as strong as typical concrete.
